

**MIT Sea Grant College Program Report No. 98-7
Revised Final Version**

Formulation of a Model for Ship Transit Risk:

Final Project Report

Dr. Hauke L. Kite-Powell
Research Specialist
Marine Policy Center, Woods Hole Oceanographic Institution

Dr. Nicholas M. Patrikalakis
Kawasaki Professor of Engineering
Ocean Engineering Department, Massachusetts Institute of Technology

Dr. Di Jin
Assistant Scientist
Marine Policy Center, Woods Hole Oceanographic Institution

Stephen L. Abrams
Research Engineer
Ocean Engineering Department, Massachusetts Institute of Technology

Johan Jebsen
MS in Ocean Systems Management
Ocean Engineering Department, Massachusetts Institute of Technology

Vassilis Papakonstantinou
MS in Ocean Systems Management
Ocean Engineering Department, Massachusetts Institute of Technology

Shu-chiang Lin
MS in Ocean Systems Management
Ocean Engineering Department, Massachusetts Institute of Technology

December 1998

Acknowledgments

This work, project number RC49, was funded in part by the MIT Sea Grant College Program under a federal grant number NA46RG0434 from the National Sea Grant College Program, National Oceanic and Atmospheric Administration, U.S. Department of Commerce. Additional funding was provided by the U.S. Coast Guard and the U.S. Army Corps of Engineers; and matching funds were provided by the Marine Policy Center of the Woods Hole Oceanographic Institution and the Department of Ocean Engineering at MIT. The authors are grateful to the members of the project advisory group, Stanley Alper and Millington Lockwood and Bruce Parker (National Oceanic and Atmospheric Administration), Richard Walker and Warren Heerlein (U.S. Coast Guard), and Larry Daggett and Zeki Demirbilek (U.S. Army Corps of Engineers), for their guidance and help in facilitating meetings and obtaining access to data. Peter Kielland and the Canadian Hydrographic Service generously provided assistance with the analysis of chart survey data. Many others at NOAA, the U.S. Coast Guard, and the U.S. Army Corps of Engineers, as well as port officials and pilots in the study ports, were helpful to the project.
